

Single-nucleus multimodal sequence

snRNA-seq

snATAC-seq

- scRNA and scATAC co-assays

Gene expression matrix

Open chromatin intensity matrix

Embedded scRNA and scATAC datasets

The cell counts **must** be identical in scRNA and scATAC dataset.

- Using **scJoint** to unify cell type annotations, and pairing individual cells using **scOptmatch** is highly recommended.
- Make sure the samples can be embedded reasonably,

Obtaining significant correlated peaks in the genomic window size of 500kb

All correlated peaks for G_i

Obtaining cell type specific (CTS) correlated peaks for G_i

Functional regions in different cells

GWAS summary data

SNPs under peaks

S-LDSC

Heritability enrichment of GWAS loci in functional regions of different cells

Inferring phenotype-relevant cell types
